Hosiery Collection and Transport Systems

- Eliminate Material Handling Problems
- Reduce Labor Cost
- Increase Quality
- Reduce Inventory
- Streamline and Speed the Flow of In-process Work Through the Plant
- Eliminate Greige Collection at Knitting Machines
- Allow Additional Machines in Existing Space

Now Socks can be Transported up to 600 Ft.

IN-LINE WASTE CONTAINERS

- DURABLE, CLEAR PLASTIC FOR EASY VISUAL INSPECTION OF WASTE LEVEL INSIDE FILTER
- REMOVABLE FILTER BASKET FOR QUICK AND EASY EMPTYING OF COLLECTED WASTE
- HIGH QUALITY FOR LONG LIFE - EVEN WHERE OIL IS PRESENT
- STEEL MOUNTING BRACKETS

Especially designed and built for the collection of yarn fibers, thread or small trim. Contaminated air enters through the top inlet cap into the filter where material is collected. The filtered air then travels through the bottom outlet cap to the vacuum system. When Ordering: Please Specify Cap Inlet Sizes.

SOUND ATTENUATORS / MUFFLERS

PLAIN END

SINGLE BELL

DOUBLE BELL

Reduces Sound Level. Designed for Material Handling Applications. Excellent for applications where compressed air intake or discharge sound levels are unacceptably high. Smooth bore allows goods or waste to transport through unit without a snag, but traps noise within.

A TUBE SIZE	REF. LENGTH	PART NUMBER

INLINE FILTERS

TYPE 1

TYPE 2

Designed for use with regenerative blowers & ring compressors. Prevents lint or dust particle build-up which may cause clogging and motor burn-out. Clear construction is ideal for visual control. Use Templex Reducer couplings or Reducing Adapters to adapt Standard Inline Filters to other tube or hose sizes.

Type 1 Filters Snap Apart to Clean Filter Media. Type 2 Filters Have a Removable Cartridge which Snaps Out for Cleaning.

- Reinforced with spring steel
- Smooth inner surface
- Flexible for tight radius bends

A high quality/low cost hose that is ideal for medium duty vacuum applications, such as discharge, dust collection and movement of light materials. Clear walls are ideal for visual control.

20	1-1/2" Waste Canister, 10-1/4 Gallon Capacity	TBV-145
21	1-1/2" Waste Canister, 20 Gallon Capacity	TBV-166

Sewing Waste Removal Systems

Patented systems are designed for use with sewing machines having chain cutters or burners. Effectively provides vacuum for removing chain and/or trimmed waste from sewing machine. The specialized design style funnel locates up around trimming knives and captures the lint as well as the waste. Used with treadle rod air switch and waste bag unit.

#03238 Turning Unit

This compressed air operated unit is ideal for turning and inspecting socks. Assembly comes with a foot pedal, 2" OD & 2-1/2" OD Turning Tubes, and all necessary hardware for easy operation and installation.

Templex offers a variety of turn-sew-turn units. Please select the unit with the vacuum source, activation method, and mounting base which best suit your needs.

Vacuum Source: Vacuum for turning can be created by **compressed air** from a compressed air system or from an external source such as a central **vacuum** system or an individual vacuum unit to turn goods. Both types are ideal for turning socks or stockings.

Activation Method: Turn-sew-turn units are activated by a foot pedal, a heel operated treadle switch, or a 3-position treadle switch. The **foot pedal** operates independently of the sewing machine and activates vacuum when pressed. The **heel operated treadle switch** installs between the motor clutch lever and treadle and activates vacuum when the treadle is heeled. The **3-position treadle air switch** activates vacuum when heeling and activates a compressed air operated chain and waste removal system when toeing the treadle.

Mounting Base: Two types of mounting bases are available: Fixed Base and Swivel Base. The Fixed Base holds the turning tube stationary in a fixed position. The Swivel Base allows the turning tube to be raised or lowered and pivot in and out for loading and sewing.

All turn-sew-turn units come complete with 2" and 2-1/2" diameter turning tubes, necessary mounting hardware, and the compressed air tube and fitting needed to complete the installation.
